SUBJ: Junction Box Mounting Bracket for Railroad Track Scales

In some cases, the serving railroad will not allow the scale manufacturer to install the junction boxes on the frame or bridge portion of the scale. When this is the case, the scale installers will need a bracket to mount the junction boxes.

On page 4 in the Railroad Track Scales section of the Heavy Capacity Product Catalog is a newly designed junction box mounting bracket for these situations. This bracket will hold two (2) standard Fairbanks junction boxes (analog or Intalogix) and mounts to the base slab of the foundation with two (2) wedge-type anchor bolts (supplied with bracket).

The appropriate number of brackets should be ordered with the railroad track scale if the serving railroad does not allow the scale manufacturer to mount the junction boxes to the frame of the scale.

If you have any questions, concerns, or comments feel free to give me a call at 601-483-4311 Ext 104 or by e-mail at pdusang@fairbanks.com.
